PROFILE

Informatics undergraduate student (7th semester) at Universitas Amikom Yogyakarta, experienced in building end-to-end software — from backend REST APIs (Node.js/Express, Python/Flask) to AI/LLM-integrated applications and machine learning pipelines. Comfortable working across the full stack and within collaborative, Scrum-based team projects. Structured, detail-oriented, and a fast learner; open to roles in software engineering, backend development, or AI/ML engineering.

EDUCATION

Universitas Amikom Yogyakarta Yogyakarta, Indonesia
B.S. in Informatics, 7th Semester | GPA: 3.96 2023 – Present
Relevant Coursework: Algorithms, Software Engineering, Database Systems, Machine Learning, Artificial Intelligence, Web Programming

PROJECTS

Sehatara – AI-Based Health Web Application 2026
Independent Developer | React · Vite · TypeScript · Gemini API (LLM) | github.com/destadrns/Sehatara

- Integrated the Gemini API (LLM) for an AI-powered health Q&A feature, applying prompt engineering to keep responses safe and contextual.
- Built an AI workflow: user symptom input → LLM reasoning → structured output via REST API and JSON handling.
- Developed frontend features including symptom logging, medication tracking, recovery planning, and LocalStorage-based data persistence.

Lithium-Ion Battery RUL Prediction – SVR + Deployment Dashboard 2026
Independent Developer | Python · Scikit-learn (SVR) · Flask · NASA Battery Dataset | github.com/destadrns/Lithium-Ion-RUL-Prediction-SVR

- Built an end-to-end ML pipeline predicting lithium-ion battery Remaining Useful Life (RUL) using Support Vector Regression (RBF kernel) on the NASA Battery Aging Dataset.
- Applied Leave-One-Battery-Out (LOBO) cross-validation for robust evaluation, achieving R^2 of 0.91 and MAE of 7.55 cycles.
- Deployed a Flask-based web dashboard for interactive RUL prediction and model performance visualization.

ETH Price Prediction – Gradient Boosting + NLP Sentiment Analysis 2025
Independent Developer | Python · Gradient Boosting · FinRoBERTa (Transformer) | github.com/destadrns/ETH-PricePrediction

- Designed an end-to-end ML pipeline combining technical indicators, lag features, and LLM-based sentiment analysis (FinRoBERTa) to predict cryptocurrency price direction.
- Applied a Transformer-based NLP model for financial sentiment extraction, demonstrating applied understanding of LLM concepts and feature integration in an AI workflow.

ORGANIZATIONS & ACTIVITIES

Bootcamp Last Mile – Gemini AI Developer Yogyakarta, 2026
Participant | AI application development with Gemini API and LLM workflows

AMCC (Amikom Computer Club) Yogyakarta, 2023 – 2024
Member | Technology and programming organization within Informatics

SKILLS

Languages & Tools: Python, JavaScript/TypeScript, React, Node.js, Express, Flask, REST API, PostgreSQL, Scikit-learn, XGBoost, Pandas, NumPy, Gemini API (LLM), Git, GitHub Actions (CI/CD)
